

Geometry Vocabulary

Down:

1. The point where lines, rays, or line segments intersect
3. A type of angle that measure less than 90 degrees
4. Lines, rays, or line segments that never cross and stay the same distance apart forever
5. Objects that are exactly equal in size, shape, length, and/or measure
6. A three-sided polygon
10. An exact location in space

Across:

2. A point that divides a line segment into two equal parts
7. Lines, rays, or line segments that form 90 degree angles
8. Part of a line that has one endpoint and extends forever in only one direction
9. Straight path of points that goes forever in two directions
11. A point, line, ray, or line segment that divides a segment or angle into two equal parts
12. Part of a line that has two endpoints
